

Excel se Notion tak

Jo aap Excel mein jaante ho, wahi Notion mein bhi kaam aayega

Ye guide kisi kaal-kalpit example se nahi banayi — **aapki khud ki do entries** se banayi hai: **BDWO REPORT** aur **BDWO CLAIM**, jo aapne khud Diary mein add ki thi.

Kiske liye	Alok Mittal
Base	Excel — jo aap pehle se pro ho
Example data	BDWO REPORT · BDWO CLAIM (aapki asli entries)
Padhne mein	~15 minute

Ek line mein poori baat: **Notion = Excel + har row apna page + real links + saved filters.**

Aap 70% Notion pehle se jaante ho

Excel ke saath jitna time bitaya hai, utna hi Notion samajhna aasan hoga. Bas naam badalte hain, concept nahi. Chaar buniyaadi mappings:

EXCEL MEIN	NOTION MEIN	FARAK
Workbook (.xlsx file)	Workspace	Poora universe — sab kuch iske andar
Sheet (neeche tab)	Page	Pages ke andar aur pages ja sakte hain, sheets mein nahi
Table (Ctrl+T)	Database	Aapki Diary Log, Tasks, Goals — sab databases hain
Column header	Property	Har column ka ek <i>fixed type</i> hota hai (neeche Chapter 3)

Aapke paas already ek example hai. Aapki  **Diary Log 2026** database Excel ke us table jaisi hai jismein columns hain: Task, Date, Time, Done, Remark. Aapne khud `BDWO REPORT` aur `BDWO CLAIM` naam ki do rows daali — bilkul waise jaise Excel mein do naye rows type karte ho.

Sabse bada farak — jo abhi samajhna hai

Excel mein row sirf *data* hai. Notion mein har row khud ek *page* hai — poori document, khulne wali. Agla chapter yahi dikhata hai, aapki apni `BDWO REPORT` entry se.

Row = Page — aapki BDWO REPORT se dekho

Excel mein **BDWO REPORT** jaisi row sirf ek line hoti — cells mein values, bas. Notion mein wahi row **khud ek page hai** jo khul sakta hai.

EXCEL MEIN

A: BDWO REPORT
B: 27-Jul C: 4:00 PM D: No

Bas itna hi. Ek line, khatam.

click

NOTION MEIN

BDWO REPORT

DATE
27 July 2026

TIME
4:00 PM

DONE

☐

REMARK

FINACLE

+ NAYA CONTENT YAHAN LIKH SAKTE HO

Ek paragraph, notes,
checklist, kuch bhi —
is row ke andar, bilkul
ek document ki tarah.

Excel mein cell ke
andar aisa kabhi nahi hota.

Left: Excel ki soch. Right: wahi row, Notion mein khula hua page

Abhi try karo: Diary Log kholo, **BDWO REPORT** row pe hover karo, **OPEN** button dabao. Wahi page khulega jo upar diagram mein hai.

Column ka type fix hota hai

Excel ki sabse aam problem: ek column mein kabhi "Yes", kabhi "Y", kabhi "TRUE" — sab chal jaata hai, koi rok nahi. Notion mein har column ka ek **fixed type** hota hai, aur wo type hamesha wahi values maanta hai.

Aapki Diary Log ke 5 columns, aapki asli do rows ke saath

TASK	DATE	TIME	DONE	REMARK
BDWO REPORT	27 Jul 2026	4:00 PM	☐	FINACLE
BDWO CLAIM	30 Jul 2026	5:00 PM	☐	FROM BRANCHES TO HO

COLUMN	TYPE	ISKA MATLAB
Task	Title	Har row ka naam. Ye hamesha text hota hai — jaise Excel ka column A.
Date	Date	Hamesha ek asli calendar date. "27/7" ya "next monday" nahi likh sakte — Notion khud date-picker dikhata hai, ghalat format ho hi nahi sakta.
Time	Text	Jaan-bujh kar plain text rakha hai, taaki "4 baje" ya "4:00 PM" jaisa likhna aasan rahe — par isiliye consistency haath se rakhni padti hai.
Done	Checkbox	Sirf do value: tick ya khaali. "haan"/"done"/"ho gaya" possible hi nahi.
Remark	Text	Free text — jo bhi likhna hai.

Maine abhi ek cheez fix ki — aur ye is chapter ka sabse achha example hai.

Aapne `BDWO REPORT` mein Time `"4:00 pm"` likha, aur `BDWO CLAIM` mein `"5:00 pM"`. Dono chalte the (koi error nahi aaya) kyunki `Time` ek **Text** field hai — jo bhi likho, wo accept karta hai.

Yahi Excel wali purani problem hai: field free-text ho toh consistency sirf discipline se aati hai, system se nahi. Maine dono ko `4:00 PM` aur `5:00 PM` kar diya — ab ek jaisa dikhta hai. Agar `Date` field ki tarah Time bhi strict hota, ye galti ho hi nahi sakti thi.

Excel ke aur types, Notion mein

EXCEL MEIN	NOTION MEIN
Data Validation dropdown	Select — sirf defined values chal sakte hain
Multiple tags in one cell (comma se)	Multi-select — proper tags, ek-ek karke
<code>=SUM()</code> , <code>=IF()</code>	Formula property

Relation, VLOOKUP nahi

Aapki Diary mein relations nahi hain — jaan-bujh kar, Diary simple rakhi gayi hai. Par aapke **2nd Brain** ke Tasks database mein hain, aur wahi is concept ke liye sabse achha example hai: **Deepak** wala case.

EXCEL MEIN — VLOOKUP

Sheet1: Tasks

=VLOOKUP(B2, Sheet2!A:B, 2, 0)

Ek-tarfa: sirf padhta hai, laake dikhata hai

NOTION MEIN — RELATION

Deepak

(People)

2 Tasks

₹30k · ₹40k

Do-tarfa: Deepak ke andar Tasks dikhte hain,
Task ke andar Deepak dikhta hai. Dono jagah zinda.

Aapke system mein asli chain:

Deepak (People) ↔ Receivable Account (₹70,000) ↔ 2 Tasks (₹30k due Jul 30, ₹40k due Aug 30)

Kisi bhi ek jagah se dusri jagah pahunch sakte ho — VLOOKUP mein aisa nahi hota.

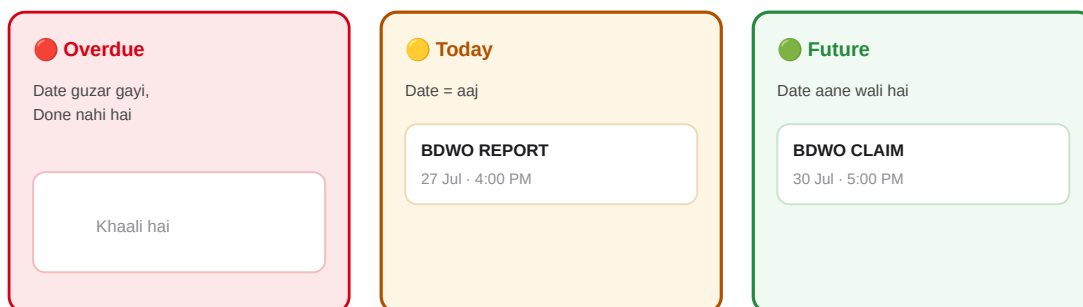

VLOOKUP dhoondh ke laata hai (ek-tarfa). Relation jodta hai (do-tarfa, hamesha zinda)

Rollup = jaise **SUMIF** doosri sheet se, par automatic. Aapki Goals mein "Progress" isi tarah Projects se apne aap aata hai — kabhi haath se nahi bharna.

View = Filter jo yaad rehta hai

Excel mein: Filter lagate ho, dekhte ho, hata dete ho. Notion mein: filter ek baar banao, naam do, **hamesha ke liye tab ban jaata hai**.

Aapki apni Diary ke Overdue/Today/Future dashboard mein aapki dono entries abhi kahan khadi hain:

Aapki BDWO REPORT aur BDWO CLAIM — dashboard ne khud sahi column mein rakh diya

Kuch bharna nahi pada. Aapne bas Date daali; system ne khud tay kiya ki kaunsi entry "Today" hai aur kaunsi "Future". Yehi ek achhi view ka fayda hai — Excel mein har baar dobara filter lagana padta, yahan ek baar set hone ke baad hamesha sahi rehta hai.

Aapki dono entries ka review

Aapne poocha tha "check karo sahi hai kya" — yahan poora review, ek jagah:

	BDWO REPORT	BDWO CLAIM
Date	✓ 27 Jul 2026	✓ 30 Jul 2026
Time	tha: 4:00 pm → ab: 4:00 PM	tha: 5:00 pM → ab: 5:00 PM
Done	✓ No (sahi, abhi hua nahi)	✓ No
Remark	✓ FINACLE	✓ FROM BRANCHES TO HO
Dashboard	✓ Today mein sahi jagah	✓ Future mein sahi jagah

Overall: sab kuch sahi hai. Sirf Time formatting mein farak tha, wo fix kar diya gaya. Data-wise koi galti nahi thi.

Ek chhota sujhaav, aage ke liye

Jab bhi Time likho, hamesha ek hi format use karo — jaise 4:00 PM . Ye system rokta nahi (Text field hai), par khud ka niyam bana lena isi tarah ki cheezein hamesha saaf rakhta hai.

Cheat sheet

EXCEL	NOTION
Workbook	Workspace
Sheet	Page
Table (Ctrl+T)	Database
Column header	Property (typed)
Row	Entry — jo khud ek page bhi hai
Cell	Property value
Filter + Sort	View (saved, tab ke roop mein)
VLOOKUP / XLOOKUP	Relation (do-tarfa, live link)
SUMIF doosri sheet se	Rollup (automatic)
Data Validation dropdown	Select property
<code>=SUM()</code> , <code>=IF()</code>	Formula property

Ek chhota practice — abhi try karo

- 1 **Diary Log** kholo, `BDWO REPORT` row `OPEN` karo — dekho poora page kaise khulta hai (Chapter 2)
- 2 **Tasks** mein Deepak wala task kholo, uska `Project` ya `Person` field dekho — wo link hai, text nahi (Chapter 4)
- 3 Diary ke `Today` aur `Future` tabs pe click karke dekho — same data, alag nazariya (Chapter 5)

Ye teen cheezein samajh aa gayi toh Excel ka experience seedha yahan chal jaayega. Baaki jo bacha hai — formulas ki exact syntax, templates — details hain, concept nahi.

Workspace: Notion → 🧠 2nd Brain · 📅 Diary

Is guide ka source: aapki apni BDWO REPORT aur BDWO CLAIM entries
